LUIS FABIAN CUEVAS MARTINEZ

(904) 917-0803 | cuevaslf11@gmail.com | Jacksonville, FL | GitHub

PROFESSIONAL PROFILE

Data Analyst specializing in predictive modeling and business intelligence, with a B.S. in Analytics and a candidate of Boston University's M.S. in Computer Science and AI. Currently a Business Data Analyst at DHL Supply Chain, supporting the Primark account across multiple distribution sites. Experienced in deploying machine learning solutions that drive revenue growth and operational efficiency, with a track record of translating data insights into quantifiable business outcomes.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-learn), SQL (Joins, CTEs, Aggregations, Window Functions)

BI & Visualization: Power BI (DAX), Advanced Excel (VBA/Macros, Pivot Tables), Tableau (LOD Expressions, Spatial Mapping, Parameters)

Concepts: Machine Learning (Regression, Classification, Clustering), Data Cleaning, Time Series Forecasting, A/B Testing

PROFESSIONAL EXPERIENCE

Business Data Analyst I | DHL Supply Chain | Bethlehem, PA & Jacksonville, FL | Jul 2026 – Present

Support the Primark account across two DC sites, partnering with site leadership on operational and strategic decisions.

- Built a Power BI report tracking Picking First Pass Yield and system skips across both sites, driving a 40% reduction in skips since implementation.
- Developed Excel and Power BI labor planning tools that let operations staff to forecasted customer volume, lifting Order Fulfillment from 99.79% to 99.91% MoM and production rates 5% across functions.
- Built a machine learning model that flags SKUs at high risk of inventory record errors for targeted cycle counts, cutting inventory adjustments by 397 QoQ.

Performance & Data Analyst | Ponce F.C. (Liga de Fútbol de Puerto Rico Pro) | Ponce, PR | Aug *2025 – Jul 2026*

Spearheaded the club's digital transformation by establishing its first analytics infrastructure; acted as the primary link between data insights and the technical staff for match preparation and player recruitment.

- Spearheaded a complete tactical renovation that led the team from 6th place in 2024 to 1st place in 2025, while achieving the highest league attendance.
- Implemented a custom Python analysis pipeline to calculate Passes Per Defensive Action (PPDA), quantifying opponent passing efficiency to identify high-output "ball-stealer" profiles for a Gegenpressing philosophy.
- Integrated Valuing Actions by Estimating Probabilities (VAEP) frameworks to objectively value off-ball pressure and its direct impact on goal-scoring probability.

Data Analyst Intern | Arocam Sports Inc. | Taunton, MA *May 2024 – Jul 2024*

Spearheaded onsite data operations for major international soccer partners, including Club América and Xolos de Tijuana. Analyzed real-time sales velocity to optimize inventory allocation for crowd sizes exceeding 10,000 attendees.

- Spearheaded data-driven strategies for major soccer events, utilizing historical sales data to optimize merchandise allocation.
- Developed predictive models using Python to forecast demand for specific SKUs, reducing overstock risk by 15% and minimizing stockouts during peak seasons.
- Created interactive dashboards in Power BI to visualize real-time sales performance, enabling agile on-site pricing and inventory decisions.
- Managed a team of associates, fostering a culture of performance analysis where sales targets are monitored and adjusted weekly based on traffic data.

EVENTS AND PROJECTS

Supply Chain Performance Analytics | Personal Portfolio Project | Jacksonville, FL *2026*

End-to-end supply chain analytics project mirroring DHL's own multi-facility distribution environment (DataCo dataset, 10,960 US orders across two DCs).

- Identified a systemic 55.7% network-wide late delivery rate — nearly identical across both facilities despite a 71% volume difference, isolating the root cause to network-level policy rather than a site-specific issue.
- Uncovered a 95.97% late rate on First Class shipping — the worst-performing mode in the network — via a Power BI category × shipping-mode heatmap, pointing to carrier performance or promise-date methodology as likely root causes.
- Built a Prophet time series model forecasting ~57% demand growth over 90 days and delivered a 3-page interactive Power BI dashboard (Executive Summary, Facility Comparison, Operational Insights) with actionable recommendations.

Mobile App Installer Retention Analysis | **Personal Portfolio Project** | Jacksonville, FL *Jan 2026*

Built an end-to-end machine learning pipeline analyzing 6,400+ installer records across nine months of mobile app data.

- Developed and compared logistic regression, decision tree, and random forest models to predict 30-day user retention; random forest achieved 87.05% accuracy and 0.9232 ROC AUC.
- Applied binary logistic regression to quantify the nonlinear relationship between install volume and retention probability, finding likelihood increases from 17.22% at one install to 90.77% at four installs.
- Engineered the full data pipeline in Python (pandas, scikit-learn, matplotlib, seaborn), resolving mixed encoding and date format inconsistencies across nine raw monthly files.

London Bike Sharing: Data Pipeline & Analytics | **Personal Portfolio Project** | Jacksonville, FL *Jan 2026*

Built a full ETL pipeline, Random Forest forecasting model, and interactive Tableau dashboard analyzing 17,414 hourly bike ride records for Transport for London (2015–2017).

- Trained a Random Forest Regressor ($R^2 = 0.24$) on weather and seasonal features to forecast hourly demand; identified humidity and wind speed as the strongest predictors of ridership.
- Designed an interactive Tableau Public dashboard featuring a configurable moving average trend line, KPI total (2,760,247 rides), and a temperature vs. wind speed heatmap.

Merchandising Analysis | **Arocam Sports Inc. / English Premier League** | Nashville, TN *Apr 2024*

Led onsite data operations for the English Premier League's US fan activation, managing real-time logistics and inventory flow for over 15,000 attendees.

- Developed and deployed predictive models (Python) to forecast hourly demand and crowd flow, reducing wait times in the jersey customization queue by 20% and preventing critical understock.
- Managed point-of-sale data ingestion using SQL, ensuring accuracy in capturing customer customization preferences for post-event analysis and retargeting.

Merchandising Analysis | **Arocam Sports Inc. / Club América & Xolos de Tijuana** | San Diego, CA *Mar 2023*

Collaborated with the Lead Purchasing Analyst to execute merchandising strategy and inventory planning for high-traffic Liga MX matches, using data-driven demand sensing to optimize SKU allocation.

- Collaborated to predict merchandise demand for a unique cross-border fan base, overcoming the challenge of limited historical sales data.
- Applied machine learning algorithms (Linear Regression in Python) to estimate price elasticity and demand for specific product categories (Jerseys vs. Scarves).

EDUCATION

B.S., Analytics | **Purdue University Global** | GPA: 3.90, Magna Cum Laude *2023 – 2026*

Coursework: AI – Deep Learning & Machine Learning, Advanced Database Concepts, Programming (Python, R), Statistics, Statistical Data Analysis, Predictive Analytics, Data Visualization, Data Curation, Data Governance
Awards: Dean's List (2024), Chancellor's List (2025–2026)

A.A., Business and Sports Administration | **Carl Sandburg College** | 58 Credits, GPA: 3.36*Aug 2019 – May 2021*

Completed 58 credits toward degree (program not finished); active member of the Men of Distinction Organization.
